

# AEROSPACE & DEFENSE

The aerospace and defense sector are going through a very challenging moment. While demand for new products is increasing in the market, pressure is quickly building for profitability, competitiveness and higher quality.

In a scenario with slim margins and complex regulatory requirements, innovation is fundamental to resolve issues that include improving fuel efficiency, lowering gas emissions, delivering better experiences to passengers and increasing public safety.

Qualitech Solutions Inc offers the aerospace and defense sector the BPI System. The most complete solution for management excellence, business process improvement, regulatory compliance and corporate governance.

BPI System lowers the cost of regulatory compliance and helps companies in the aerospace and defense industry to maximize success, increase productivity, reduce risk and adhere to aerospace and defense regulations such as AS9100. The solution enables aerospace and defense organizations to map, analyze and continuously improve efficiency by integrating different management frameworks.

By offering end-to-end activity insights across roles, each agent is better able to recognize opportunities for improvement and spearhead customized solutions for dramatic changes in the industry's competitive environment.

BPI System simplifies and standardizes excellence and compliance management by providing a software platform that centralizes and integrates documentation processes, KPI monitoring, policies and regulation procedures, industry models, task distribution, follow-up comments, risk awareness and triage initiatives.

## Main Benefits

- Standardizes and streamlines regulatory and legal compliance management.
- Eases efforts to effectively comply with AS9100 and other regulations.
- Drives efforts to develop the workforce and improve business processes across the enterprise.
- Ensures the delivery of aerospace and defense products that consistently meet customer requirements.
- Proactively identifies and manages potential risks, saving the company's budget.
- Centralizes and provides complete visibility of product development processes and portfolio.
- Simplifies the development, review, and approval of new aerospace and defense products as well as related documents.
- Accelerates investigation of quality deviations and customer claims.
- Runs processes and departmental audits and reduces organizational vulnerability.
