

# BPI System - Food & Beverage Solution

BPI System effectively and efficiently automates food safety programs to achieve better oversight, real-time information, better results, and better safety assurance, streamlining food safety management.

The solution leads the company through creating a comprehensive food safety plan with the knowledge and procedures needed to do the job right. The main related disciplines are completely covered by BPI System components, including compliance management, documents & records management, procedures/policies, process management, CAPA management, risk assessment, control monitoring, audits, and more. It's a complete tool to manage any organization food safety system.

BPI System is an integrated management software system that addresses the specific needs of food quality management, providing a framework of modular resources that automates and streamlines food quality processes. BPI System range of components are fully integrated to deliver a best-in-class solution, linking business strategy to food quality issues, cause analysis, and CAPA.

It effectively manages quality processes, supplier evaluation, equipment maintenance and calibration, audit management, key performance indicators, employee training, and more – while improving customer satisfaction and reducing management costs.

## Main Benefits

- Easily record customer complaint issues, nonconformances and incidents, as well as the resulting corrective and preventive actions.
- Ensure consistent procedures, policies and records management.
- Identify, analyze and mitigate risks across the production process.
- Keep audits records to guarantee compliance.
- Input, monitor, publish and report performance indicators promoting enterprise alignment.
