

## BPI System - Medical Devices Solution

The medical device industry can be credited with numerous examples of improving healthcare and quality of life for patients all over the world, but they also face unprecedented pressure and understanding the regulatory and demographic environment of the industry is only part of the challenge. The real struggle for medical device companies is defining the right strategy and then efficiently executing it.

BPI System offers the industry's most advanced and comprehensive software for compliance and performance management that meets the stringent needs of the medical devices industry in all aspects from controlling documentation, risks to performance indicator monitoring, projects, assets, product lifecycle management and much more.

BPI System lowers the cost of regulatory compliance and helps companies in the medical devices industry maximize success, increase productivity, reduce risk and adhere to various global regulations.

The solution enables companies to continuously improve operations by adhering to various international regulations as well as integrating in a single platform of different management frameworks including managing risks, maintenance, processes, assets, calibrations, product development, performance indicators, and much more.

By offering staff with insight in their role in end-to-end activities, they become better able to recognize opportunities improvement and keep up with the dramatic shifts in the industry's competitive global environment. Powerful support for collaboration with coworkers across organizational boundaries then enables them to play a central role in making smart improvements in the way the organization serves its clients.

BPI System simplifies and standardizes excellence and compliance management processes by providing a software platform with a central point of access to all up-to-date process documentation, key performance indicators, related documentation such as policies, templates, procedures and task related applications, as well as an online platform for registering suggestions, risks, complications and initiatives.
