

## BPI System – Wood, Paper, & Furniture Solution

Research shows that 69 percent of innovation leaders have real-time visibility into supplier performance metrics,<sup>9</sup> making automation a strategic imperative for companies wanting to achieve this level of maturity. It's part of what's driving increased adoption of automated quality management system (QMS) software, a market that's growing 31 percent year-over-year according to Gartner.<sup>10</sup> From a logical perspective, implementing an automated QMS is critical for companies whose business models are built upon a deep network of suppliers. That's because quality problems—even when due to a supplier's mistake—will always reflect the brand itself. When just one weak link in the supply chain can erase millions of dollars in brand value, automation is the only strategy that makes sense.

Companies in the wood, paper and furniture industries must deal with a vast landscape of risks that chip away at profitability daily. Beyond internal quality and safety challenges, organizations are also subject to a complex array of consumer safety regulations that vary across the globe. Getting products to market quickly without sacrificing quality or employee safety demands a comprehensive approach to compliance, one that only automation can provide.

### BPI System Main Benefits:

- Protect brand value
- Minimize quality costs
- Reduce incidence rate
- Track incidents and near misses
- Monitor safety KPIs in real time
- Increase visibility into risks
- Prevent defects and complaints
- Comply with standard and regulatory requirements
- Benchmark suppliers and collaborate on SCARs
- Shorten corrective action closure times
- Accelerate time to market
- Mitigate environmental impacts
